not a questionnaire**

What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored ADOS-2 result, cannot establish a diagnosis, and must not be placed in a clinical record.

ADOS-2 is one specialist input. It does not by itself diagnose autism or replace developmental history, adaptive information, and clinical formulation.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

A trained examiner uses official modules, toys/materials, and scoring conventions. Digital catalogue listing does not make ADOS-2 a remote self-test.

CONTEXT

Official WPS manuals define modules, algorithms, and training. This page does not independently verify scoring or reproduce tasks. Do not invent a DIY ADOS workflow.

SOURCE

Independent verification evidence must be approved before this entry can be assigned.
Official kits and examiner training apply.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce ADOS-2 item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	2 of 5	A little
2	3 of 5	Sometimes
3	1 of 5	Not at all
4	1 of 5	Not at all
5	3 of 5	Sometimes
6	2 of 5	A little
7	2 of 5	A little
8	4 of 5	Often
9	3 of 5	Sometimes
10	5 of 5	Most days
11	3 of 5	Sometimes
12	4 of 5	Often
13	2 of 5	A little
14	5 of 5	Most days

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

The Autism Diagnostic Observation Schedule, Second Edition, is a semi-structured observational assessment published by WPS. Modules vary by age and language. It is specialist work, not a self-report pack.

ADMINISTRATION

A trained examiner uses official modules, toys/materials, and scoring conventions. Digital catalogue listing does not make ADOS-2 a remote self-test.

CLINICAL BOUNDARY

ADOS-2 is one specialist input. It does not by itself diagnose autism or replace developmental history, adaptive information, and clinical formulation.

GOVERNANCE

Independent verification evidence must be approved before this entry can be assigned. Official kits and examiner training apply.
