RESPONSE MODE

Self-report

INSTRUMENT

AQ-50

SOURCE

Autism Research Centre

CLINICAL ROLE

**Full AQ questionnaire
support**

What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored AQ-50 result, cannot establish a diagnosis, and must not be placed in a clinical record.

AQ-50 does not diagnose autism. High or low totals cannot replace developmental evidence or observation.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

Adults complete fifty statements, usually on paper or in an authorised digital form. Results inform clinician review alongside developmental history and, where used, specialist observation.

CONTEXT

Official ARC materials and the original paper describe scoring. This page does not independently verify a production scoring rule. Use one named version consistently.

SOURCE

Check the exact 50-item form. This catalogue entry does not assign the measure from the public site.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce AQ-50 item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	2 of 5	A little
2	1 of 5	Not at all
3	5 of 5	Most days
4	4 of 5	Often
5	3 of 5	Sometimes
6	1 of 5	Not at all
7	3 of 5	Sometimes
8	1 of 5	Not at all
9	4 of 5	Often
10	2 of 5	A little
11	1 of 5	Not at all
12	5 of 5	Most days
13	5 of 5	Most days
14	4 of 5	Often

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

The 50-item AQ is the original adult self-report length. It covers more statements than AQ-10. It remains a questionnaire, not an observational diagnosis.

ADMINISTRATION

Adults complete fifty statements, usually on paper or in an authorised digital form. Results inform clinician review alongside developmental history and, where used, specialist observation.

CLINICAL BOUNDARY

AQ-50 does not diagnose autism. High or low totals cannot replace developmental evidence or observation.

GOVERNANCE

Check the exact 50-item form. This catalogue entry does not assign the measure from the public site.
