What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored Body Image Scale result, cannot establish a diagnosis, and must not be placed in a clinical record.

Body Image Scale is not a diagnosis. A result cannot replace clinician-led assessment, history, examination, or investigation where those are required.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

Body Image Scale is completed as a focused self-report and stored for clinician review. This public page does not collect answers or return a score.

CONTEXT

Published scoring conventions may exist in official materials. This public page does not independently verify scoring, cutoffs, or a production scoring rule. Use the official form and scoring instructions for the version you intend to use.

SOURCE

Catalogue information on the measure's purpose, source and administration requirements. Check the official administration guidance and suitability for your clinical purpose.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce Body Image Scale item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	3 of 5	Sometimes
2	3 of 5	Sometimes
3	2 of 5	A little
4	2 of 5	A little
5	5 of 5	Most days
6	1 of 5	Not at all
7	5 of 5	Most days
8	3 of 5	Sometimes
9	5 of 5	Most days
10	4 of 5	Often
11	1 of 5	Not at all
12	3 of 5	Sometimes
13	3 of 5	Sometimes
14	2 of 5	A little

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

The Body Image Scale asks about self-consciousness, attractiveness, and related concerns after disease or treatment. Higher totals indicate greater body-image distress for clinician review. Published screens around 10 are metadata, not diagnoses.

ADMINISTRATION

Body Image Scale is completed as a focused self-report and stored for clinician review. This public page does not collect answers or return a score.

CLINICAL BOUNDARY

Body Image Scale is not a diagnosis. A result cannot replace clinician-led assessment, history, examination, or investigation where those are required.

GOVERNANCE

Catalogue information on the measure's purpose, source and administration requirements. Check the official administration guidance and suitability for your clinical purpose.
