later versions

CLINICAL ROLE

Clinician-rated
severity support

What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored BPRS result, cannot establish a diagnosis, and must not be placed in a clinical record.

BPRS does not diagnose a psychotic disorder. It is a rated severity profile for clinician review.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

A clinician rates items after interview. It is not a patient questionnaire.

CONTEXT

This page does not select a production item set or independently verify scoring. Specify the version in your protocol.

SOURCE

Confirm the exact BPRS version and rater training. This catalogue entry does not assign the measure from the public site.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce BPRS item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	3 of 5	Sometimes
2	1 of 5	Not at all
3	2 of 5	A little
4	2 of 5	A little
5	3 of 5	Sometimes
6	4 of 5	Often
7	3 of 5	Sometimes
8	3 of 5	Sometimes
9	3 of 5	Sometimes
10	1 of 5	Not at all
11	4 of 5	Often
12	5 of 5	Most days
13	1 of 5	Not at all
14	3 of 5	Sometimes

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

The Brief Psychiatric Rating Scale is a clinician rating covering several symptom areas. 16-item, 18-item, and 24-item versions exist. Naming BPRS without the item set is not operationally complete.

ADMINISTRATION

A clinician rates items after interview. It is not a patient questionnaire.

CLINICAL BOUNDARY

BPRS does not diagnose a psychotic disorder. It is a rated severity profile for clinician review.

GOVERNANCE

Confirm the exact BPRS version and rater training. This catalogue entry does not assign the measure from the public site.
