What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored Conners result, cannot establish a diagnosis, and must not be placed in a clinical record.

A Conners rating, even from the correct edition, is not an ADHD diagnosis. It is informant or self-report evidence for clinician review.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

The exact product determines who rates, which items appear, and how reports are generated. Many Conners products also depend on publisher scoring software.

CONTEXT

No scoring claim is possible until the exact edition is named. This page does not independently verify any Conners algorithm.

SOURCE

Name the exact Conners form, age band, and rater before any live workflow.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce Conners form not specified item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	4 of 5	Often
2	5 of 5	Most days
3	2 of 5	A little
4	2 of 5	A little
5	2 of 5	A little
6	2 of 5	A little
7	1 of 5	Not at all
8	4 of 5	Often
9	3 of 5	Sometimes
10	1 of 5	Not at all
11	4 of 5	Often
12	3 of 5	Sometimes
13	1 of 5	Not at all
14	1 of 5	Not at all

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

Multi-Health Systems publishes several Conners products for ADHD and related concerns, with parent, teacher, and self-report versions across age bands. A catalogue line that says only 'Conners' is not operationally complete.

ADMINISTRATION

The exact product determines who rates, which items appear, and how reports are generated. Many Conners products also depend on publisher scoring software.

CLINICAL BOUNDARY

A Conners rating, even from the correct edition, is not an ADHD diagnosis. It is informant or self-report evidence for clinician review.

GOVERNANCE

Name the exact Conners form, age band, and rater before any live workflow.
