CLINICAL ROLE

**Full CORE outcome
measure**

What this report lays out

- Named instrument, version, and provenance
- Item-level response pattern without source wording
- Methodology, references, and clinical boundary
- Responsible clinician review rather than automated conclusions

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored CORE-OM result, cannot establish a diagnosis, and must not be placed in a clinical record.

CORE-OM does not diagnose. Domain scores are outcome evidence for clinician review.

A report designed for clinical review

Clear structure, visible provenance, and an explicit boundary help a clinician review recorded evidence without mistaking a questionnaire for a conclusion.

REVIEW

Clients complete 34 items using the official form. Services should not shorten it ad hoc and still call it CORE-OM.

CONTEXT

Official domain scoring is defined by CORE materials. This page does not independently verify scoring.

SOURCE

Independent verification evidence must be approved before this entry can be assigned.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

Item-level layout without source wording

This marketing sample uses invented item numbers and response labels only. It does not reproduce CORE-OM item wording, and the pattern below is not a real result.

ITEM	ILLUSTRATIVE SCALE POINT	FICTIONAL RESPONSE
1	1 of 5	Not at all
2	4 of 5	Often
3	3 of 5	Sometimes
4	3 of 5	Sometimes
5	5 of 5	Most days
6	1 of 5	Not at all
7	1 of 5	Not at all
8	2 of 5	A little
9	3 of 5	Sometimes
10	3 of 5	Sometimes
11	4 of 5	Often
12	4 of 5	Often
13	3 of 5	Sometimes
14	4 of 5	Often

Item numbers, scale points, and responses on this page are invented for layout demonstration. They are not this instrument's item set, scoring structure, or thresholds.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

CORE-OM is the original 34-item outcome measure covering well-being, problems, functioning, and risk. It is longer than CORE-10 and is often used at start and end of an episode rather than every session.

ADMINISTRATION

Clients complete 34 items using the official form. Services should not shorten it ad hoc and still call it CORE-OM.

CLINICAL BOUNDARY

CORE-OM does not diagnose. Domain scores are outcome evidence for clinician review.

GOVERNANCE

Independent verification evidence must be approved before this entry can be assigned.
